PGA ALUMINUM COMPOSITE PANELS

Aluminum Composite Panels (ACP) are flat panels made of two thin aluminum sheets bonded to a nonaluminum core of fire-resistant material. ACP are used for exterior and interior cladding, signage, insulation and other construction and architectural applications. The main advantage of ACPs is their light weight and durability. They are also easy to install and maintain and come in a variety of colors and finishes, making them a popular choice for modern buildings. In addition, ACPs have good fire-resistant properties.

Advantages :

- ✓ Available in many colors and finishes.
- ✓ Non-combustible assembly
- ✓ Great for rain-screen facade systems.
- ✓ Excellent durability and maintenance-free.
- ✓ Many available customization options.
